

# Teleradiology

- ❖ Teleradiology is a branch of telemedicine in which telecommunication systems are used to transmit radiological images from one location to another for reports from qualified radiologists.
- ❖ Interpretation of all non invasive imaging studies, such as digitized X-rays, CT, MRI, Ultrasound and nuclear medicine studies can be carried out.
- ❖ Hospital can easily send their patient images to Teleradiology providers to receive quick and expert interpretation of medical images.

## Benefits

- Faster Diagnostics
- Reduces Cost
- Improved Consultation
- Improves Rural Area Care

**This service is free of cost in Govt. Health Institutions where it is functional.**
